

SEAR Periodic Report Third Sprint

Goals for This Sprint:

The goals for this iteration are to further define the features section of the project section 3, and start getting into the diagramming some of conceptual models. This will include how data interacts and moves through the program as listed in Section 4 Data requirements.

What we completed:

We were unable to make as much progress this sprint however we added to Our Data requirements getting it started.

Next Iteration goals:

The goals for the the next iteration have not changed much since we did not make much progress in section 3. They are to further define the features section of the project section 3, and start getting into the diagramming some of conceptual models. This will include how data interacts and moves through the program as listed in Section 4 Data requirements which will be re-iterated further and possible go into non-functional requirements.

Reflection on progress:

We may have set too many goals for this last Sprint and instead should focus on iterating and finishing the sections we absolutely need to get done first instead of anything that may be a lower priority.

Two Week Sprints	Christopher Blake Matis	Michael Adams	Hour Worked Combined
Time Spent on Proposal 2/26	6 hours	6 hours	12 hours
Second Sprint 3/12	4 hours	6 hours	10 hours
Third Sprint 3/26	3 hours	3 hours	6 hours
Fourth Sprint 4/9			
Fifth Sprint 4/23			
Sixth Sprint 4/30			
Final Report			
Total Time Spent working	13 hours	15 hours	28 hours
