SEAR Periodic Report Fourth Sprint

Goals for This Sprint:
The goals for this iteration are to further define the features section of the project section 3, and start getting into the diagramming some of conceptual models. This will include how data interacts and moves through the program as listed in Section 4 Data requirements.
Note: There should still be another iteration to go for these sections before moving on.

What we completed:
We made still further progress on section and 3 and have begun the conceptual modeling process, but have yet to finish all of the modeling. The data requirements may be complete once all the conceptual modeling has been finished.

Next Iteration goals:
-Finalizing Section 3 so we can completely define and specify all of the data in the program and how they will be stored and used.
-Produce a reviewable version of section 4 for feedback amongst ourselves in case anything else needs to be added.

Reflection on progress:
We will have to put more time in to finish the models and meetup to try and see if they make sense to each other. Although we have been making incremental progess.

Two Week Sprints	Christopher Blake Matis	Michael Adams	Hour Worked Combined
Time Spent on Proposal 2/26	6 hours	6 hours	12 hours
Second Sprint 3/12	4 hours	6 hours	10 hours
Third Sprint 3/26	3 hours	3 hours	6 hours
Fourth Sprint 4/9	6	6	12
Fifth Sprint 4/23			
Sixth Sprint 4/30			
Final Report			
Total Time Spent working	19 hours	21 hours	40 hours
